

Project P03 - AI Demand Forecasting Dashboards

ID: P03 | version: v1 | asset_type: project | language: en
sector: Industry | duration: 10 months
stack: Azure, Databricks, Power BI, Python

Client

Industrial raw materials supplier C

Description

Demand forecasting and stock optimisation models connected to the ERP with live dashboards.

Measurable result

Stock-outs down 30%

Context

Supplier of industrial raw materials planning stock from spreadsheets and monthly ERP exports.

Challenges

Volatile demand, long lead times and limited trust in manual forecasts.

Solution

Forecasting models per product family trained in Databricks, scheduled into Power BI with stock coverage alerts.

Deliverables

- Forecasting pipeline
- Power BI forecast and stock dashboards
- Model monitoring procedure

Team

- C05 - Claire Fontaine - Dashboard owner
- C07 - Lina Haddad - BI analyst
- C09 - Nour El Houda Ben Salah - Data engineer
- C12 - Ines Rekik - Forecasting models
- C20 - Elodie Bertrand - Project manager
