

Project P09 - Customer Churn Prediction

ID: P09 | version: v1 | asset_type: project | language: en

sector: Telecom | duration: 7 months

stack: Databricks, Python, GCP, MLflow

Client

Telecom operator I

Description

Churn scoring model, feature pipeline and production deployment with drift monitoring.

Measurable result

Target retention up 12%

Context

Telecom operator losing subscribers without a reliable early-warning signal.

Challenges

Imbalanced data, changing customer behaviour and the need for actionable scores.

Solution

Feature pipeline and XGBoost churn model tracked in MLflow, deployed with drift monitoring.

Deliverables

- Feature pipeline
- Churn scoring model
- Monitoring dashboard
- Model documentation

Team

- C12 - Ines Rekik - ML engineer
- C14 - Mariem Chaabane - Junior data scientist
