

Project P05 - Fashion Supply Chain Visibility

ID: P05 | version: v1 | asset_type: project | language: en
sector: Fashion / Luxury | duration: 9 months
stack: Apache Kafka, Snowflake, Tableau, SQL

Client

Fashion house E

Description

Event streams between production, warehouses and boutiques with stock tracking dashboards.

Measurable result

Near real-time stock visibility

Context

Fashion house with stock spread across factories, warehouses and boutiques, reported with daily delay.

Challenges

Fragmented stock events and no consistent definition of available stock.

Solution

Kafka event streams into a Snowflake model with shared stock definitions and Tableau monitoring.

Deliverables

- Event catalogue and data contracts
- Snowflake stock model
- Tableau stock dashboards

Team

- C06 - Omar Trabelsi - Dashboard developer
- C08 - Julien Marchetti - Lead data engineer
